

GAURAV KUMAR

Senior Staff Software Engineer | Rust | Go | Distributed Systems | Security | Cloud Infrastructure

☎ (+91)-8756746698 | ✉ gauravsingh12341@gmail.com | 🌐 Website | 🐙 Github | 💼 LinkedIn

Summary

Senior Staff Software Engineer with 7+ years of experience building distributed systems, cloud infrastructure, security platforms, and confidential computing solutions. Strong expertise in Rust, Go, Kubernetes, Linux, networking, and multi tenant SaaS architectures. Experienced in leading the design and development of large scale backend services, platform security features, remote attestation systems, AI infrastructure, and cloud native platforms across AWS, Azure, and GCP.

Technical Skills

Programming Skills:	Rust: 7y, C++: 3y, Python: 2y, Go: 3y, C: 2y
AI Skills:	RAG, Prompt Engineering, Vector Databases, Embeddings, MCP
Container Management:	Docker, Kubernetes, OpenShift, Helm, Operator, Docker Compose
Cloud:	Azure, AWS, GCP, IBM Cloud
Networking:	TCP/IP, UDP, QUIC, HTTPS, gRPC, TLS/mTLS, Proxying
Security:	Confidential Computing, Remote Attestation, SGX, TDX, SEV, Zero Trust
Database:	Cassandra, CockroachDB, Qdrant, Redis
Automation/Build:	Jenkins
Observability:	Grafana, Splunk
Debugging:	gdb, strace

Work Experience

Senior Staff Software Engineer at Zscaler

April 2026 – Present

- Contributing to the design and development of a unified data path platform used across multiple Zscaler products, enabling consistent traffic handling, improved observability, and reduced client complexity.
- Drove adoption of the unified platform by integrating ZPA and ZIA traffic flows, establishing common processing and debugging workflows.
- Led the integration of ZDX telemetry into the unified platform, delivering enhanced observability and end-to-end operational visibility.

Lead Cloud Development Engineer at Citrix

July 2025– March 2026

- Designed and developed Synthetic HDX, a distributed monitoring platform deployed across POPs that continuously validates EDT connectivity through local and inter POP application launches, with grafana dashboards providing real time service health and POP status.
- Enhanced Edge Service security by adding Web Application Firewall (WAF) and rate-limiting controls.
- Extended EDT NAK statistics to include range support.
- Built a cgo wrapper for the EDT C library to enable safe and idiomatic Go APIs
- Added EDT support in the CGS tool to enable secure, low-latency communication over UDP for virtual apps and desktops.

Senior Software Engineer at Fortanix Inc.

June 2019 – June 2025

• ArmetAI Team

- * Contributed to the design and development of a confidential Retrieval-Augmented Generation (RAG) pipeline.
- * Implemented core backend services and integrated all microservices.
- * Designed and implemented attestation mechanisms for a new AMD Confidential VM platform with GPU support, enhancing security and verification processes.
- * Architected and implemented security hardening for the Qdrant vector database.
- * Added protections against prompt injection, jailbreak attacks, toxicity, PII exposure, and hallucination in the RAG pipeline.
- * Packaged and configured Armet AI services for deployment in Customer-Managed VPCs.

• Confidential Computing Manager (CCM) Team

- * Conceived and implemented a confidential data clean room.

- * Spearheaded the Multi-Party Support feature, enabling collaborative workflow creation and execution across multiple accounts.
- * Developed a microservice for workflow monitoring, enabling efficient management of workflows.
- * Played a key role in the launch of the CCM SaaS product, a revolutionary platform for confidential computing (<https://ccm.fortanix.com>).
- * Architected and implemented core back-end functionalities, including the development of initial REST APIs, metering, and audit-logging microservices.
- * Delivered advanced features including DCAP attestation support, secure cluster join, multi-registry configuration, Node Agent packaging, and a Kubernetes Operator for CCM Node Agents.
- * Migrated CCM services to run on Ubuntu 24.04.
- **Data Security Manager**
 - * Designed and developed a k8s plugin to encrypt secrets and ConfigMaps stored in etcd using DSM.
 - * Implemented a plugin to securely inject secrets directly into Kubernetes workloads.

Education

MAY 2019	B. Tech. MECHANICAL ENGINEERING IIT Kanpur	7.6/10.0
APRIL 2015	Class XII (CBSE) SECONDARY DELHI PUBLIC SCHOOL,GAYA	94.8%
